WAREHOUSE MANAGEMENT SYSTEM

Take full warehouse control

ABOUT WHS

Warehouse management system (WMS) is a software solution that offers visibility into a business entire inventory and manages supply chain fulfillment of operations from the distribution centre to the store shelf.

WHS controls the reception, movement, storage and release of merchandise in warehouse. WHS enables to track the items across the different locations in bins from different warehouse. WHS built with scalable planning, implementation, and monitoring modules for modern warehousing and suitable for businesses in retail, wholesale, manufacturing, food production sectors which have requirements to manage inventory levels.

Warehouse management system supports Automatic identification (Auto-ID) RFID, QR Code and Barcode scanning functionality which makes checkouts easy. Auto-ID helps to identify the right goods on right time with accurate data.

WHS is classified into two different system:

Standalone system – Deployed on premise utilizing the company's hardware and network system.

Cloud-based system – SaaS solutions that use cloud technology and offer flexibility, scalability, security, and disaster recovery.

FEATURES

Web based System
On-premise Version
Multi-tenant
Cloud base System
Multiple warehouses
Multi-Location
Maintain Bins
Stock Management
Inventory Tracking
Pick and pack
Labour Management
Stock Handling
1D/2D barcode and QR code
Receiving
Stock Preparation.
Shipping
Inter stock movement
Reporting

BENEFITS

Mobile Receipts
Mobile Shipment
Easy Inventory Tracking
FIFO (First in Final Out)
LIFE (Last in First out)
FEFO (First Expired First out
Automatic identification (Auto-ID)
RFID, QR Code and Barcode scanning
Supports Windows and Linux Environments
Built on Open source platform
Rapid Implementation
Lower Cost
